

SSC Salt Chlorinator New Cell Cable (for all SSC models)

Notice :

In some occasion, the Salt Chlorinator cell cable was found overheated with poor cable connection. To deal with the issue, we have developed the New Salt Chlorinator cell cable to replace the existing cable.

Instruction :

To replace the cable, disconnect the power supply of the Salt Chlorinator and unplug the old cable. Connect with the new cell cable and tighten it with the allen key provided. The 2 black cables for the positive and negative polarity should be connected to the white socket on the cell, while the yellow water sensor cable should be connected to the remaining socket.

Caution :

- ** This new cell cable is only for Emaux SSC Salt Chlorinator cell connection.
- ** Only replace the cable when it is overheated or with poor connection.
