

HYDRORIDER®

PROFESSIONAL AQUATIC EQUIPMENT

Hydorider produces in Italy equipment for aquafitness and functional re-education in water. Thanks to a dense network of resellers, it distributes its products in swimming pools, sports centres, spas and water parks all over the world. From 2000 -the year the brand was born- to today, Hydorider has been committed to satisfying the needs of an ever-increasing number of customers, offering customizable equipments and accessories, available in different price ranges, practically free of maintenance and defects. Over time, products such as the AquaJump, the RiderBand elastic band and the FOW -Fitness On Water- floating board have been added to the aquabikes and aquatreadmills. Every single equipment is made with materials, methods and procedures that guarantee quality, durability and ease of use.

HYDRORIDER AQUABIKE

Hydrorider AquaBike Professional

A stationary aquatic bicycle specially designed to be used in swimming pools. It does not require any particular maintenance: the frame has been designed to withstand the most intense stresses to which it is subjected during use.

The vertical and horizontal adjustment of the saddle and handlebar and the height setting of the bases allow each practitioner to find the optimal set-up with the water level between waist and chest.

The resistance, produced by the central flywheel with sliding blades, is adjustable on three levels (beginner, intermediate and advanced) as well as changing as the pedaling speed varies.

Hydrorider AquaBike Pro Fix

A simplified version of the Professional model, from which it differs in the resistance which varies only with the change in speed, generated by a central flywheel with four fixed elements.

Hydrorider AquaBike Pro Statiq

The perfect fusion between the Professional model and the Easy Line model.

As in the Aquabike Professional, the handlebar and saddle are adjustable both vertically and horizontally to allow the user to find the optimal set-up in the water.

The resistance is produced by the ABS element applied to the pedals and increases as pedaling speed increases.

Hydrorider AquaBike Easy Line

The Hydrorider Aquabike created to offer the design and reliability that distinguish Hydrorider products at a reasonable price.

The saddle and handlebars are only vertically adjustable. The resistance is generated by an ABS element applied to the pedals. The intensity of the work varies with the variation of pedaling speed.

All Aquabikes from the Pro Line (Professional/Pro Fix/Pro Statiq) are also available in the red version.

HYDRORIDER AQUATREADMILL

Hydrorider AquaTreadmil Professional

With the AquaTreadmill Professional, Hydrorider has made it possible to walk and run on the spot just like on a land treadmill, eliminating the strong stresses on the joints of the lower limbs and the spine.

The platform has an adjustable inclination on three levels and is made up of 308 independent rollers in plastic material which, rotating on flexible rods, cushion the impact with the platform during the race.

In the Hydrorider aquatic treadmill there are no brakes or motors, only the resistance of the water.

Hydrorider AquaTreadmill Easy Line

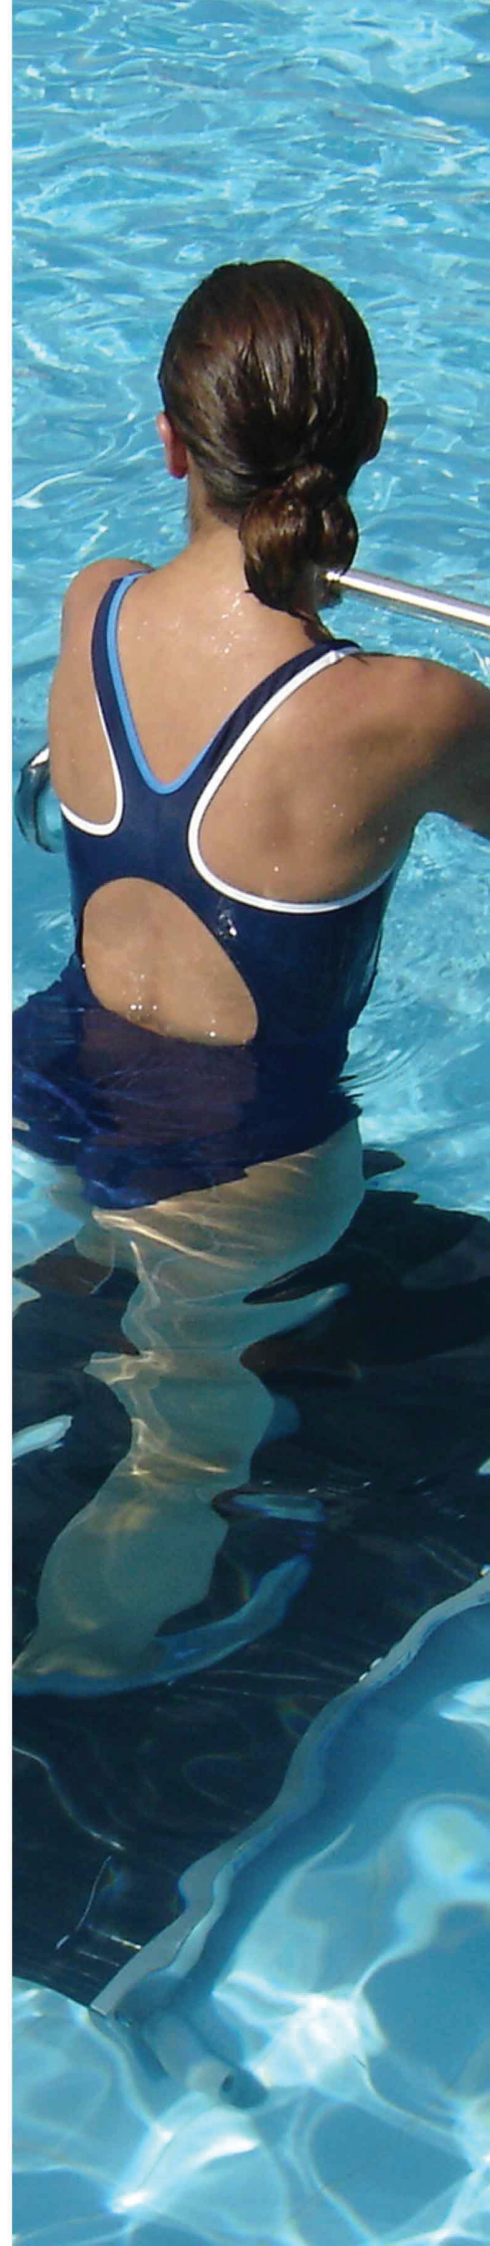

The AquaTreadmill Easy Line was created to satisfy the growing demand for a equipment for running and walking in water that was economical, lightweight and foldable.

As in the Professional model, the treadmill platform is made up of 308 independent rollers in plastic material which rotate on flexible rods, cushioning the impact with the platform during the run.

In the AquaTreadmill Easy Line there are neither brakes or motors: by exerting a force-displacement-movement backwards and downwards on the platform lane, the feet slide on the rollers counteracting the resistance of the water.

The Aquatreadmill Hydrorider are also available in the Red and Black&Red versions.

HYDRORIDER AQUAJUMP

The AquaJump Hydrorider is a professional aquatic trampoline designed specifically for use in a pool. The vulcanized rubber suction cup feet which guarantee excellent adhesion and protection of the pool bottom and the stackability which allows for an optimal reduction of poolside spaces are the peculiar characteristics of this jump.

With the AquaJump Hydrorider you can enjoy the multiple benefits of water gymnastics and have fun!

RIDERBAND HYDRORIDER

RiderBand Hydrorider is the calibrated-size elastic band that allows you to increase the workload by modifying the range of motion of the upper and lower limbs, offering different options and intensities to your training. Usable in high or low water, RiderBand can be combined with all Hydrorider equipments.

The quality of the stitching and the textile material used guarantees greater elasticity and water resistance compared to the most common elastic bands on the market.

RiderBand was designed to last over time, resist tears and dry in one hour to neutralize and eliminate the smell of humidity.

HYDRORIDER FOW - FITNESS ON WATER

Similar to a surfboard, FOW is an inflatable, floating and rigid board, equipped with a non-slip deck and built with a triple layer of PVC which ensures maximum stability.

FOW brings fitness to the water through exercises that improve posture, flexibility, balance, agility, coordination and strength.

Training with FOW also means training to control the center of gravity, weight distribution and balance if you don't want to risk continuously falling into the water!

FOW allows intense, customizable and fun muscle training, proving suitable for beginners and children.

It can be used in pairs, in group and individual sessions.
